

DESCRIPTION

The **GEFCO Select #EE114-C Wind Anemometer** is used on fountains with medium to high elevation, jet-originated spraying effects. This device measures the wind velocity and relays that information to a **GEFCO Model #EE114 Wind Monitor**, a **GEFCO Model #EE140-11 ETH Fountain Controller** or any PLC with digital fast counters in order to activate control valves, VFDs and/or motor starters to prevent wind from blowing water out of the pool area. This sensor emits a set of 3 digital signals with each revolution of the cups. The diameter circumscribed by the anemometer is such, that one revolution equals one MPH accurate to 150MPH. There are no replacement parts.
