

**DESCRIPTION**

The **GEFCO Select #PE10A Adjustable Niche Overflow Fitting** is placed in walls above static water level for over fill protection, usually in the lowest pool.

Bronze construction with integral grounding screw, the overflow fitting has a 1-1/2" female connection and is normally connected directly into the main drain line, via 1-1/2" piping. Slotted face plate prevents floating debris from entering drain line. One overflow fitting will accommodate approximately 500 square feet of pool surface area. More may be needed in case of larger pools.

The **GEFCO Select #PE105A Overflow Fitting** features an adjustable overflow level stand pipe in order to better hide the fitting architecturally and to adjust the level to limited degree.

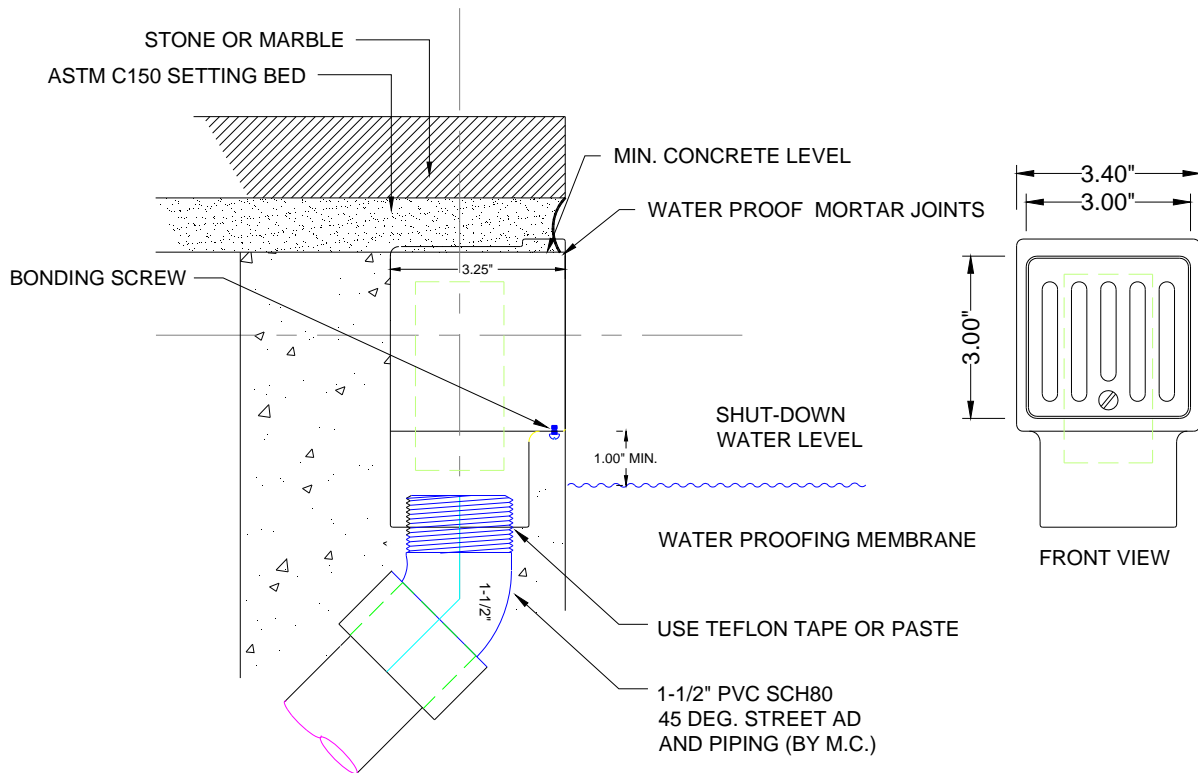

**TYPICAL SPECIFICATIONS:**

**\* GEFCO Select #PE105A Wall Niche Overflow:**
